

5th year of Reiwa, 3rd International Cooperation Talk Show

Challenges to Improve Mathematics Academic Achievement of Central American Children: Thirty years journey dedicated to international cooperation.

Mr. Norihiro NISHIKATA

Mr. Norihiro Nishikata has been involved in JICA's educational cooperation projects for about 30 years, mainly mathematics education projects in Central America. He has also been involved in the formulation of education projects, evaluation and training in Africa, Asia, the Middle East and Latin America as a JICA International Cooperation Expert (Education, Human Development Department). People who are interested in international cooperation or even would like to work in this area, please join!

I quitted my job as a primary school teacher quitted and joined international cooperation work. I am currently working for JICA on various education projects. Looking back on my journey, I feel that I have been supported by many people I have met at various junctures in my life. I also deeply feel that not a single one of my experiences so far is waste. All of them have become my blood in current work. I would be honoured if my experiences can be some help to you when you are making your future life choices.
